

## **“Prescription Medication Consent Form”**

The providers at Moncks Corner Pediatrics use an electronic medical records system that allows electronic prescribing of medications. Medications are sent to your pharmacy through a secure electronic prescription connection (Rx Hub) which improves the timely and accurate transmission of your medical information.

To optimize the use of this electronic capability, and coordinate your child’s care between us and the specialists, we ask that the responsibility party of our patients allow us to access their medication history through the RX Hub.

Please check only one of the following:

- I consent to allow my child’s provider to access any and all medication history
- I consent to allow my child’s provider to access only medication history for medications prescribed in this office.
- I DO NOT consent to my child’s provider accessing any medication history
